

Airports

Airport codes added by you are exclusive

1. Airport codes are exclusive to the instance where you add them. If your company operates multiple instances of the SAFE application, adding an airport code in one instance will not automatically propagate it to all the other instances.
2. Only administrators can view this screen.

To view the Airports screen, click **Airports** from the menu panel.

The Airports screen lets you view and manage airports and their codes.

The screenshot displays the 'Airports' management interface. At the top, there is a search bar labeled 'Search for airports' and a '+ Create airport' button. On the left, a list of airports is shown, each with its ICAO code, name, and location. The selected airport, 'Arvidsjaur', is shown in a detailed view on the right. The detailed view includes the following information:

Name: Arvidsjaur	FAA:	Latitude: 34.4997222222222
City: CORNELIA	ICAO: KAJR	Longitude: -83.5566666666667
Country: United States	IATA:	Time (UTC-05:00) Eastern Time Zone: (US & Canada)

See [How to manage airports](#) to learn more about the actions you can perform in the screen.
